Profile

Peter is an experienced multi-cloud IT professional with a versatile background in system administration, professional services, and consulting. He is proficient in Linux, excelling at automating CI/CD pipelines with modern software development practices. Committed to learning, Peter enjoys updating skillsets in emerging trends and technologies. As a technical consultant, he focuses on driving business value through automation, cloud solutions, and modern DevOps approaches.

Skills:

- **CI/CD:** Azure DevOps, GitLab, GitHub Actions, ArgoCD
- **IaC:** Terraform (Community), Terraform Cloud
- **Secrets Management:** HashiCorp Vault Enterprise, HCP Vault
- **Microservices Deployment & Container Orchestration:** Kubernetes (Bare Metal, AKS, GKE), Podman, Helm, Service Mesh
- **Automation:** Bash shell scripting, Python
- **Project Management:** Working with stakeholders and technical peers across a complex and large enterprise environment

Work Experience

06/2025 – present
Toronto, Canada

Senior Cloud DevOps Engineer, GenAI Platform Intact Financial Corporation

Build and operate enterprise GenAI platform capabilities across GCP, Azure, and AWS in a highly regulated financial services environment.

AI Guardrails Platform (GCP)

- Led the greenfield deployment of Dynamo AI on GKE with NVIDIA L4 GPU node pools, establishing Intact’s enterprise-standard guardrails platform for all GenAI applications, with controls for prompt injection, toxicity and content moderation, PII redaction, off-topic detection, and financial-advice policy.
- Enabled custom guardrail policies by generating synthetic training data from Azure OpenAI models via the LiteLLM proxy for mini fine-tuning jobs.
- Built Argo CD release and upgrade workflows from vendor Helm charts, integrating GKE Gateway API, Shared VPC, Vault Secrets Operator, and Dynatrace.

Model Platform Modernization (Azure)

- Led the Terraform-managed migration from standalone Azure OpenAI to Azure AI Foundry, expanding model choice to third-party providers including Anthropic.
- Exposed the Responses API through Azure APIM to support newer models that require it.
- Led a compliance-driven LLM traceability initiative, enforcing the x-user-id header on all LLM API calls with prompt audit logging in Azure Monitor.

Agent Governance Platform Enablement (AWS and HashiCorp Vault)

- Extended the Agent Governance Platform to Amazon Bedrock AgentCore, enabling teams to onboard AWS-hosted agents into a central platform where all company agents share the same governance and controls.
- Secured agent onboarding with Vault-brokered credentials and AppRole-based bearer token issuance for agent event emission and tool calls.

11/2024 – 06/2025
Toronto, Canada

Senior Cloud DevOps Consultant, Professional Services Blue Mantis

Led HashiCorp Vault and AWS platform engagements for global enterprise clients.

Lead DevOps Consultant | Global Travel Services Provider

- Led the migration from self-hosted Vault Enterprise (EC2, Consul) to HCP Vault Dedicated, eliminating the administrative overhead of self-managed infrastructure.
- Established private connectivity from client AWS workloads to HCP Vault via AWS Transit Gateway attachments to the HashiCorp Virtual Network (HVN).
- Automated HCP Vault deployment with Terraform and GitHub Actions to the client’s linting, testing, and security standards.
- Developed Python tooling where no vendor migration path existed. Built discovery

Work Experience

11/2020 – 11/2024
Toronto, Canada

scripts to inventory the self-hosted environment and migration scripts that moved 1,000 KV v2 secrets, 320 AppRole roles, 180 AWS auth method roles, 56 Kubernetes auth method roles, and 23 SSH secrets engine roles.

Cloud DevOps Consultant, Professional Services

Sourced Group (Acquired by Amdocs)

Embedded long-term with named enterprise accounts in the telco and public sector, leading cloud platform and app modernization delivery.

Lead GCP Consultant | Major Canadian Telco

- Led a six-engineer DevOps squad: owned the backlog, ran daily standups, removed blockers, and served as primary reviewer for architecture decisions and pull requests.
- Replaced long-lived static service account keys with just-in-time, ephemeral GCP credentials from Vault Enterprise, retrofitting 100 GitLab CI/CD pipelines and HCP Terraform workflows with dynamic secrets.
- Codified GCP IAM across the org, folder, and project hierarchy with reusable Terraform modules, bringing legacy manual bindings across 80 projects under managed Terraform state.
- Eliminated ticket-based access requests with a self-service portal that triggers GitLab pipelines for automated role assignment.
- Hardened Cloud Run deployments with GitLab pipelines that gate releases on Prisma Cloud vulnerability scans and enforce Binary Authorization.

Technical Lead | Canadian Federal Public Sector Agency

- Led cloud readiness assessments of 5 applications, identifying 3 pathfinder candidates and giving the agency a defined starting point for a new Azure modernization program.
- Stood up the agency's migration factory with a reusable deployment pattern for Windows-based .NET applications (Azure DevOps, Terragrunt, Azure SQL, App Service Environment deployment slots), enabling the agency to continue migrations independently after project handoff.

02/2019 – 11/2020
Toronto, Canada

Professional Services Consultant

Scalar Decisions (Acquired by CDW Canada)

Delivered hybrid IT engagements across on-premises and cloud environments for enterprise clients.

On-Prem

- Deployed VMware on Nutanix, NetApp and Dell EMC storage arrays, and Cisco and Brocade SAN switching in physical datacenters, automating vSphere provisioning with Terraform and SAN switch configuration with Ansible.

Cloud

- Built Terraform-automated Azure transit networking with Palo Alto NGFW, implemented VMware DR via Azure Site Recovery, and deployed NetApp Cloud Volumes.

09/2014 – 02/2019
Toronto, Canada

Technical Architect

Long View Systems

Served as the infrastructure SME for clients without in-house expertise, delivering projects across network, storage, and virtualization (VMware, Nutanix, Cisco, NetApp, Azure), and supported pre-sales through POC design and SOW reviews.

Education

09/2005 – 08/2008
Toronto, Canada

Computer Systems Technology | 3-yr diploma

Seneca College
