Profile

Peter is an experienced IT professional with a versatile background in system administration, professional services, and consulting. He is proficient in GCP and Azure, excelling at automating CI/CD pipelines with modern software development practices. Committed to lifelong learning, Peter enjoys updating skillsets in emerging technologies. As a technical consultant, he focuses on driving business value through coding, automation, and cloud solutions.

Skills:
- **CI/CD:** Azure DevOps, GitLab, GitHub Actions, ArgoCD
- **IaC:** Terraform (OSS), Terraform Cloud (SaaS)
- **Secrets Management:** HashiCorp Vault Enterprise
- **CSPs:** GCP, Azure
- **Container Orchestration:** Podman, Kaniko, Kubernetes
- **Automation:** Git, Bash Scripting, Golang

Work Experience

11/2024 – present
Toronto, Canada

Senior Cloud DevOps Consultant
Blue Mantis
Member of the Professional Services team.

Lead DevOps Consultant at a Global Travel Services Provider:
- Currently leading a long-term migration from self-managed Vault Enterprise with Consul storage on AWS EC2 to HashiCorp Cloud Platform (HCP) Vault managed service.
- Designed HCP Vault cluster architecture to meet current and future requirements.
- Established AWS transit gateway integrations with central network teams to enable flexible connectivity between client environments and HCP.
- Implemented GitHub Actions-based Terraform pipeline for automated deployment and management of HCP infrastructure.
- Developing custom migration tooling with bash and python automation to transfer existing auth methods and secrets engines, as dedicated migration tooling is not currently available for this transition path.
- Collaborating with global platform, security, and application stakeholders.

Lead Azure Consultant at a Global Insurance Provider:
- Lead the development of Azure DevOps pipelines to publish custom metrics to Azure Monitor via REST API using Terraform external data script.
- Implemented cross-platform observability solution integrating custom metrics between Azure and OpsRamp environments using Azure Event Hub streaming.

11/2020 – 11/2024
Toronto, Canada

Cloud Consultant
Sourced Group (An Amdocs Company)
Member of the Professional Services team.

Project experiences as the Lead GCP Consultant for major Canadian telco provider
DevOps Squad Team Lead:
- Led a six-member team managing the backlog, driving product management, leading standups, unblocking engineers, and conducting architecture and PR reviews.

Work Experience

HashiCorp Vault Implementation:
- Led the integration of just-in-time ephemeral credential delivery for GCP service accounts within Terraform pipelines.
- Retrofitted existing GitLab pipeline flows with dynamic secrets injection capabilities.
- Implemented the injection of ephemeral credentials into HCP Terraform Cloud workspaces using the Vault API.

GCP Permissions Automation:
- Developed Terraform modules for GCP org/folder/project level permission automation and role assignments.
- Automated IAM role assignments using GitLab pipelines.
- Streamlined permission management by migrating manually created IAM configurations into managed Terraform states and code.

Container Image Hardening:
- Enhanced Cloud Run deployment security by implementing GitLab pipelines with integrated Prisma vulnerability scanning and GCP binary authorization.

Project experience as the Lead Azure Consultant for CAD Federal Public Agency
Azure Enablement:
- Led cloud migration readiness assessments of pathfinder applications.
- Implemented a tailored .NET app deployment pipeline for Windows-based CRUD systems using Azure SQL, App Service Environment with deployment slots, Azure DevOps, and Terragrunt.

02/2019 – 11/2020
Toronto, Canada

Professional Services Consultant
Scalar Decisions (A CDW Company)
Member of the Professional Services team, with a focus on Hybrid IT.

Project experiences included:
- Terraform automation around reusable Azure transit infrastructure using Palo Alto NGFW.
- Cloud readiness assessment and cost analysis on Azure.
- VMware DR from on-premises to cloud using Azure Site Recovery.
- Cloud native DRaaS using Azure and Commvault.
- NetApp Cloud Volumes on Azure.

09/2014 – 02/2019
Toronto, Canada

Technical Architect
Long View Systems
Member of the Professional Services team.

- Led and executed infrastructure projects spanning network, storage, and virtualization using VMware, Nutanix, Cisco, NetApp, and Azure technologies.
- Contributed to pre-sales activities as a secondary focus. These included conducting workload discovery in customer environments, designing POCs, and vetting Statements of Work (SOW).

Education

09/2005 – 08/2008
Toronto, Canada

Computer Systems Technology | 3-yr diploma
Seneca College
